Migrating from Microsoft Planner to Project for the Web from Microsoft Teams

Microsoft
Planner

Microsoft Project
for the Web

Organizations, especially those with immense project portfolios, use several project management software for smarter working conditions. Modern work environments need call for modern portfolio management tools such as Microsoft Office Planner and Project for the Web.

These systems come with improved user interfaces that change the overall approach to project management and team collaborations. But there is still a difficulty — how to move data from Microsoft Planner to Project for the Web.

Manual migration brings multiple challenges:

- Data duplicates
- Misnaming of files
- Loss of crucial data
- Takes much time
- Risks of human errors
- Additional operational costs

They affect the quality and completeness of the migration process, which, in turn, affects project timeliness and quality.

You are not alone

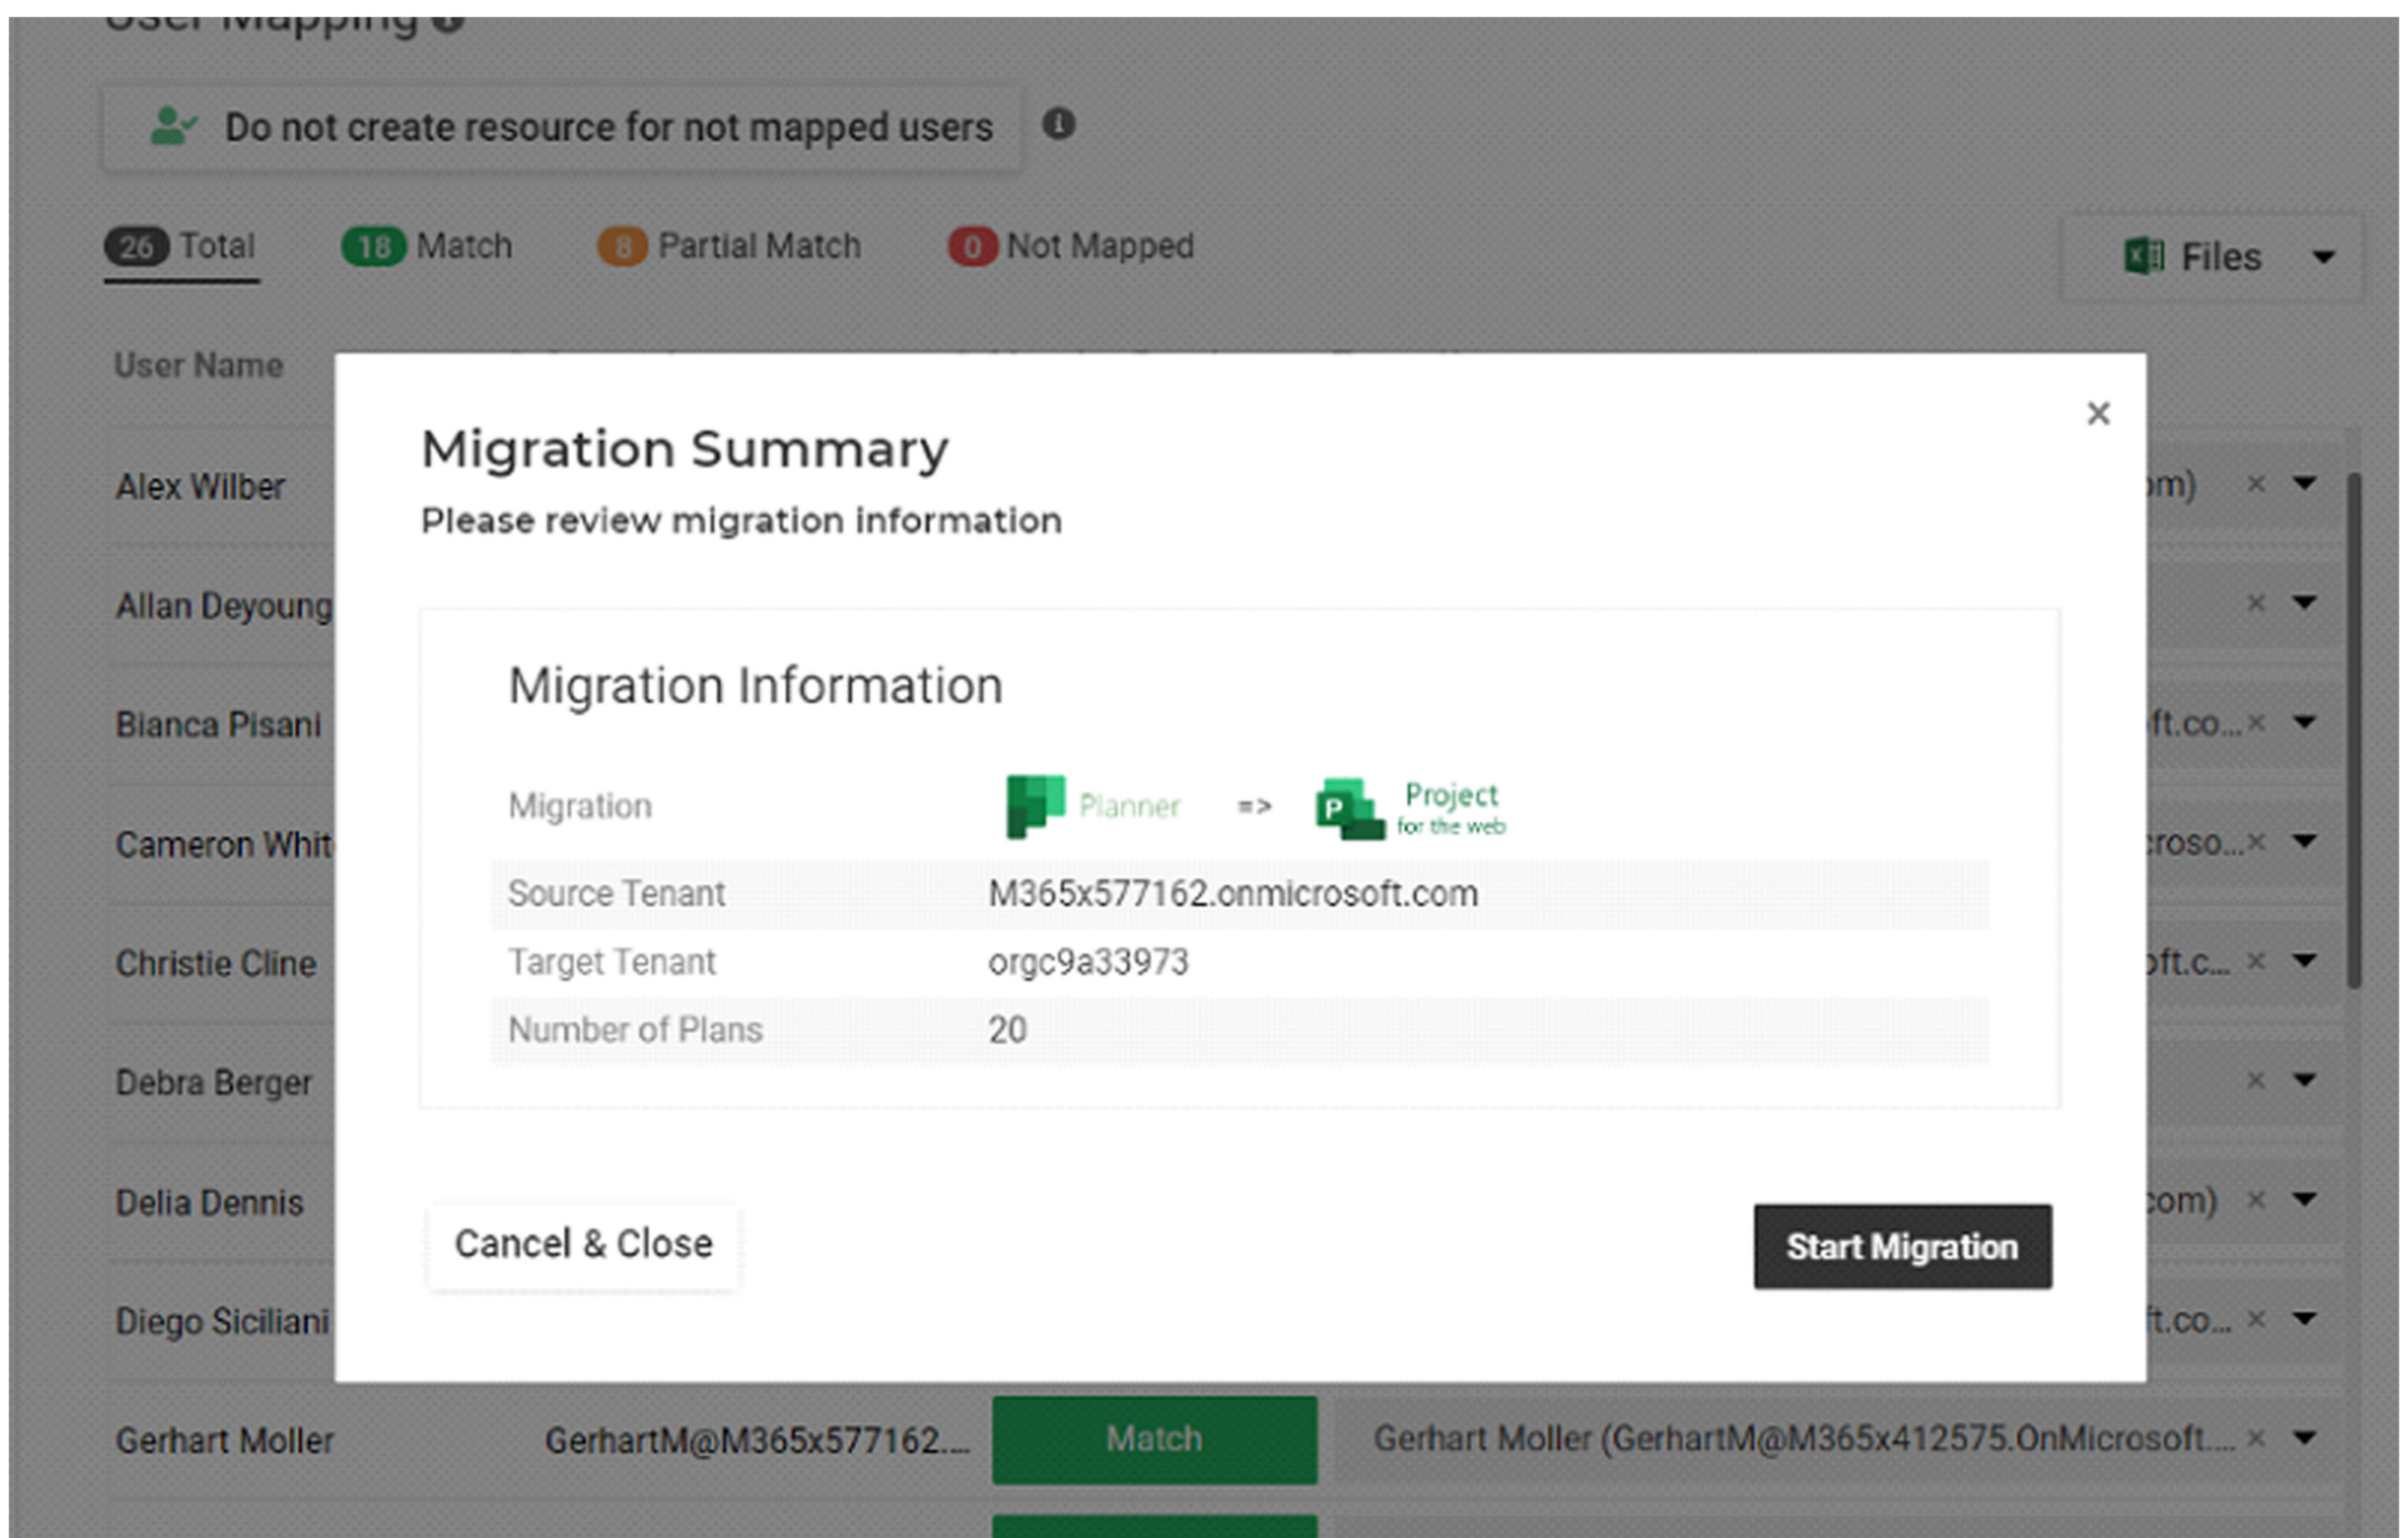

If your organization is currently struggling with moving data between systems such as Project for the Web and Office 365, you're not alone.

Many companies that have experienced similar problems have overcome their challenges by choosing a unique lifeline – an automated tool called FluentPro Project Migrator.

How Project Migrator solves data migration challenges

Project Migrator offers seamless data migration between different project management systems. Using a robust wizard, Project Migrator tackles many of the problems related to data migration between multiple systems. As a result, project managers and IT specialists may easily move from Planner to Project for the Web. In addition, Project Migrator offers a risk-free method with a built-in data mapping interface that helps mitigate uncertainties about how to assign tasks, execute updates, and provide feedback on progress between teams.

To perform the migration, you need to add Project Migrator to your personal apps in Microsoft Teams. After signing in, you can easily connect to the source and target systems and choose all data or just specific items for migration. Additionally, Project Migrator allows you perform user mapping before you launch the migration.

What are the advantages of having the best data migration tool?

Quicker migration process

With Project Migrator, you save more than 90% of the time it would have cost you to migrate to a new project management system using the outdated manual migration method.

Reduced cost

An automated, cloud-based solution eliminates the need to hire additional individual hands for data migration, reducing company overhead costs and boosting ROI.

Minimized risk

The automated cloud storage system reduces the risk of losing crucial data that arises from human errors and document corruption.

Secured data migration

Thanks to its secured operation on the MS Azure cloud platform, Project Migrator guarantees the security of your project data throughout the entire migration process.

Satisfactory service

Project Migrator reduces the disruption to everyday business operations, ensuring timely project completion and satisfied stakeholders and clients.
