

Microsoft Planner Migration between Office 365 Tenants

Businesses with large and expanding project portfolios often require Microsoft Planner migration between Office 365 tenants. As a result of acquisitions or business mergers, organizations may need to undertake an Office 365 migration before or after the business deal.

Migration between Office 365 tenants causes numerous challenges:

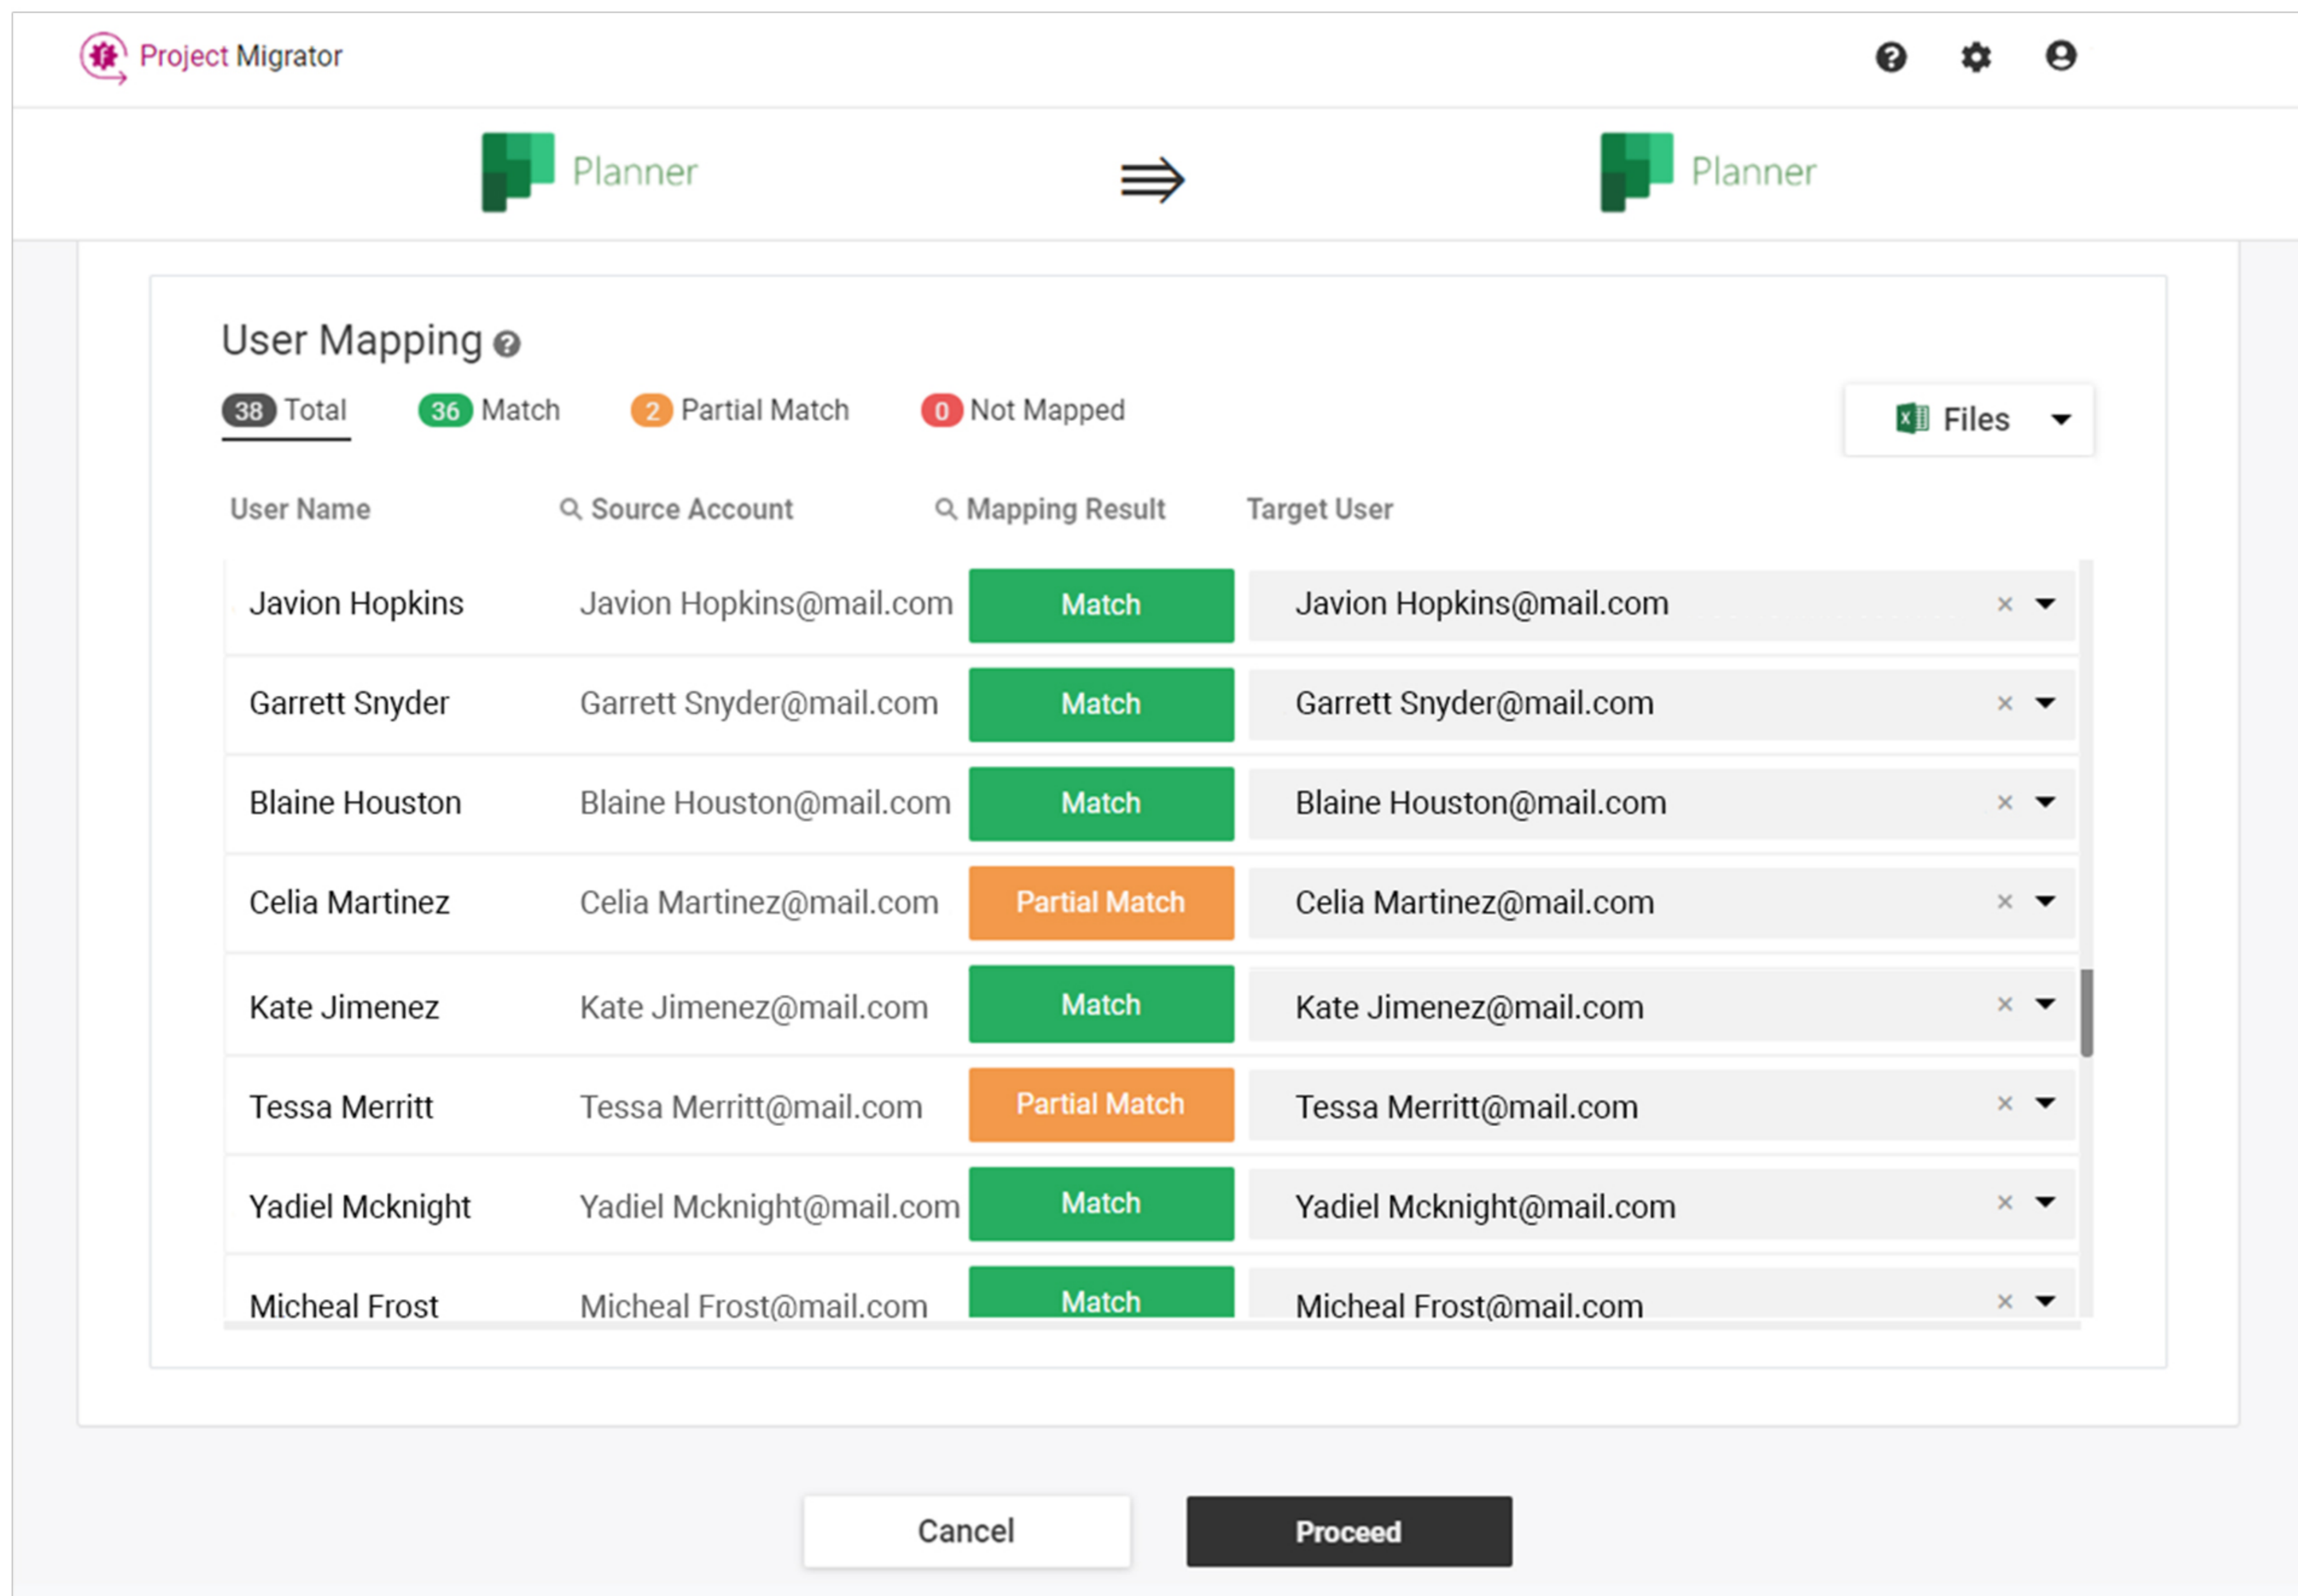

- Manual migration takes much time and effort or can even stall projects.
- Manual migration requires additional resources, increases cost, and creates negative ROI.
- It gives room to many human errors.
- It complicates project management, makes project monitoring, updates, and status challenging to picture in real-time.
- Moreover, by migrating manually, organizations can face data corruption or data loss.
- Lastly, MS Planner migration requires the inputs of technical specialists. A crucial help many companies do not want to hire because of the additional cost they bring.

To solve these problems, many organizations have adopted MS Planner migration solution called **Project Migrator**.

How Project Migrator Eases Microsoft Planner Migration Challenges

Project Migrator is a unique Microsoft Planner migration solution designed by FluentPro. The software incorporates a user-friendly interface that assists companies in scoping vital information. It includes an Object Mapping feature that allows mapping the data beforehand. This option helps to reduce disruption and confusion during and after migration.

The solution uses a click-select feature to choose all or just the needed data for migration. It eliminates the problem of what tenant data should go to another tenant environment.

From there, it launches the migration process, which is **90% faster and 100% accurate**. The fully automated process with highly secured capabilities ensures that none of what is being migrated and shared breaks in the long run.

How to Migrate Easily Using Project Migrator Functionality

Project Migrator is highly functional software. It enables companies to migrate data from one Office 365 Planner tenant to another. It features a simple migration scenario that helps organizations to publish and share project plans with team members.

One unique functional aspect of Project Migrator is the accurate and straightforward migration. It automates data migration. You do not need to spend weeks manually transferring data. This is especially important for businesses in terms of cost and ROI.

Once project manager comes up with what to migrate, clicking the start button the migration process begins automatically. A migration summary window follows the swift migration process. With this, you can tell what progress is being made, whether successful or not.

The included mapping capability also means you can move multiple or selected tenants. It comes in handy during a merger, acquisition, or when the business is expanding.
