

Trello Migration to Microsoft Office 365 Planner

Many organizations rely on specific software like Trello or Microsoft Planner when managing project portfolios. But as organizations are growing, their goals are also changing.

Besides, a shift in technology and focus changes mean organizations can no longer rely on outdated capabilities incompatible with current practices. Businesses must switch project management systems to accelerate portfolio performance, keep up with company growth, and satisfy stakeholders' interests. To achieve this, organizations must migrate data from previous software to the new one.

Some organizations tend to use manual migration methods to move data between different platforms. They do this to avoid the additional cost of hiring the needed technical expertise for data migration. However, a manual migration method brings multiple challenges:

- It takes immense effort and time to complete.
- It hampers productivity and discourages client trust.
- In addition, manual data migration increases human errors that may critically damage the overall project portfolio performance.

As a result, many Project Managers and IT Specialists seek a third-party tool migrating data fast without errors and further expenses. The software that guarantees successful Trello to Microsoft Planner migration is **Project Migrator**.

Innovative Ways Project Migrator Eases Trello to Microsoft Planner Migration

FluentPro Project Migrator is a cloud-based project management migration software. It automates the process of moving data from Trello to Microsoft Planner and eliminates all possible human errors.

The cloud-based option of Project Migrator adds an extra layer of security to the company's data. It makes it a risk-free, reliable solution for moving projects, tasks, and other sensitive data from Trello to Microsoft Planner.

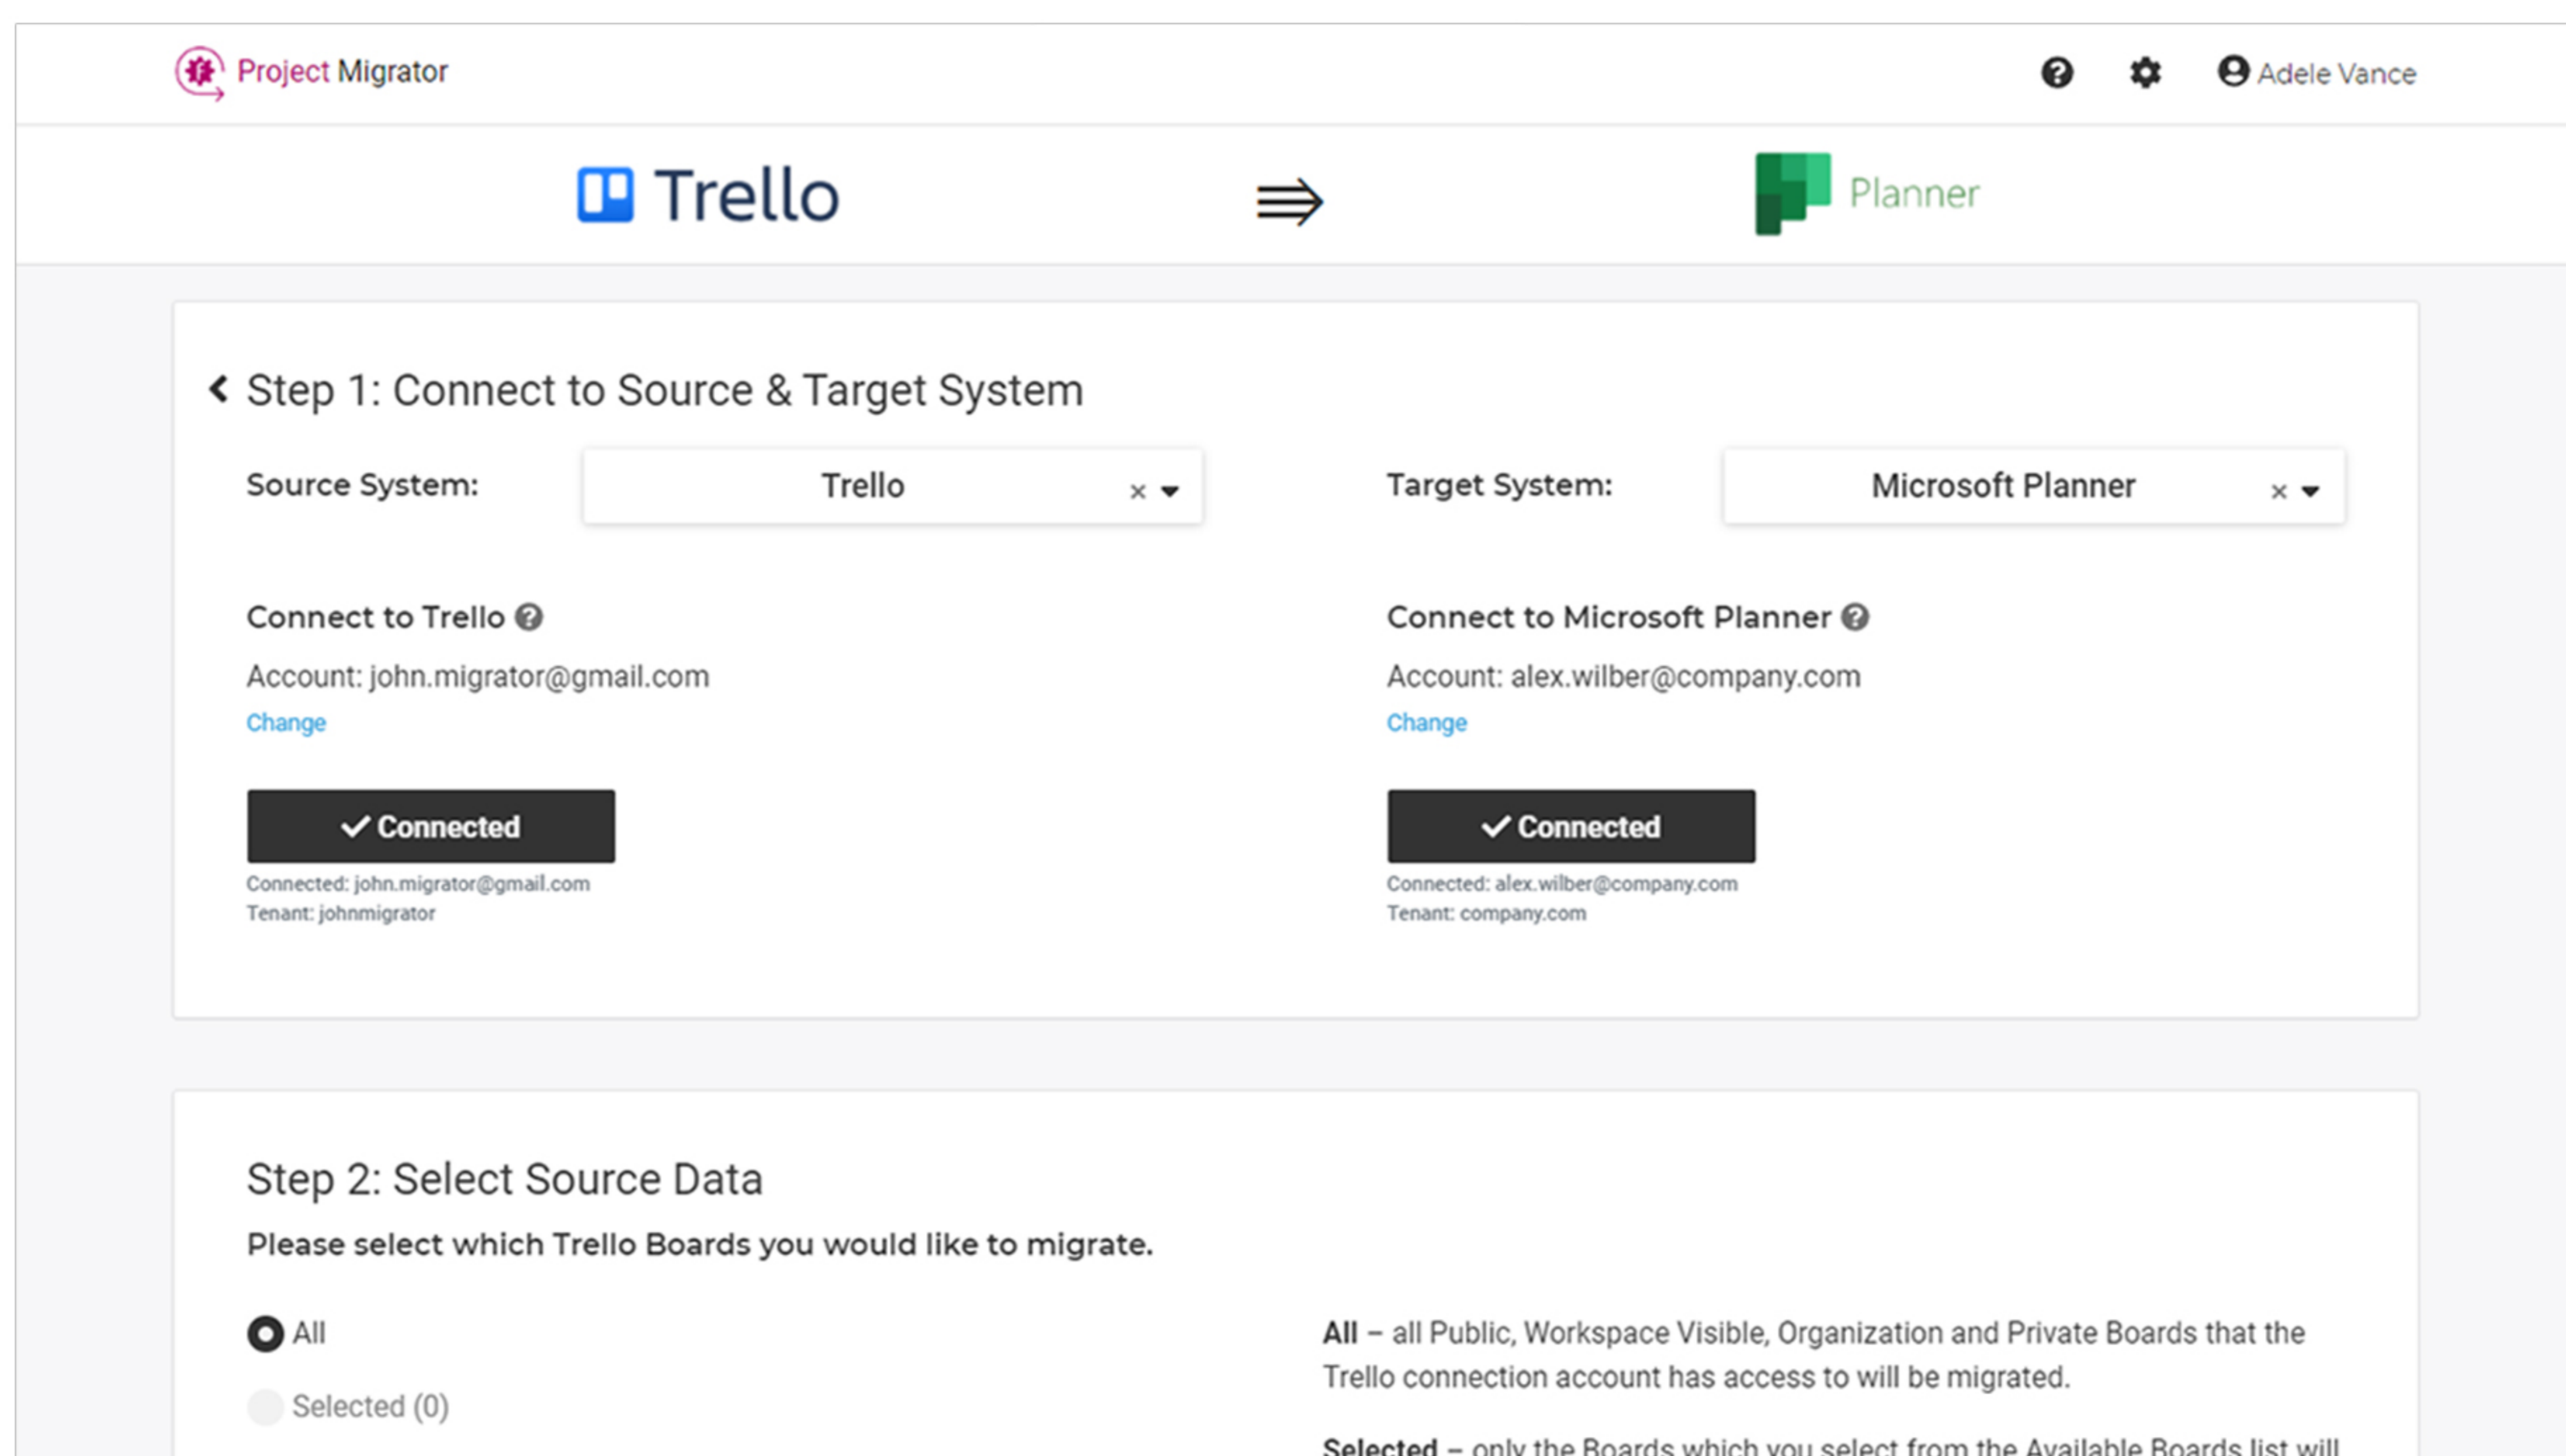

Project Migrator guarantees precise data migration for project managers who want to make sure they can identify the correct data to migrate. Organizations can select the exact amount and type of project, task, or other data to move.

How Project Migrator Makes Trello Migration Simple

Hundreds of organizations use **Project Migrator** to transfer data from Trello to Office 365 Planner. Its interface features a simple design enabling you to identify and focus on what you want to do.

First, IT specialists need to connect to Trello and Microsoft Planner or vice-versa. A company that doesn't want to move all the data can quickly move their preferred one.

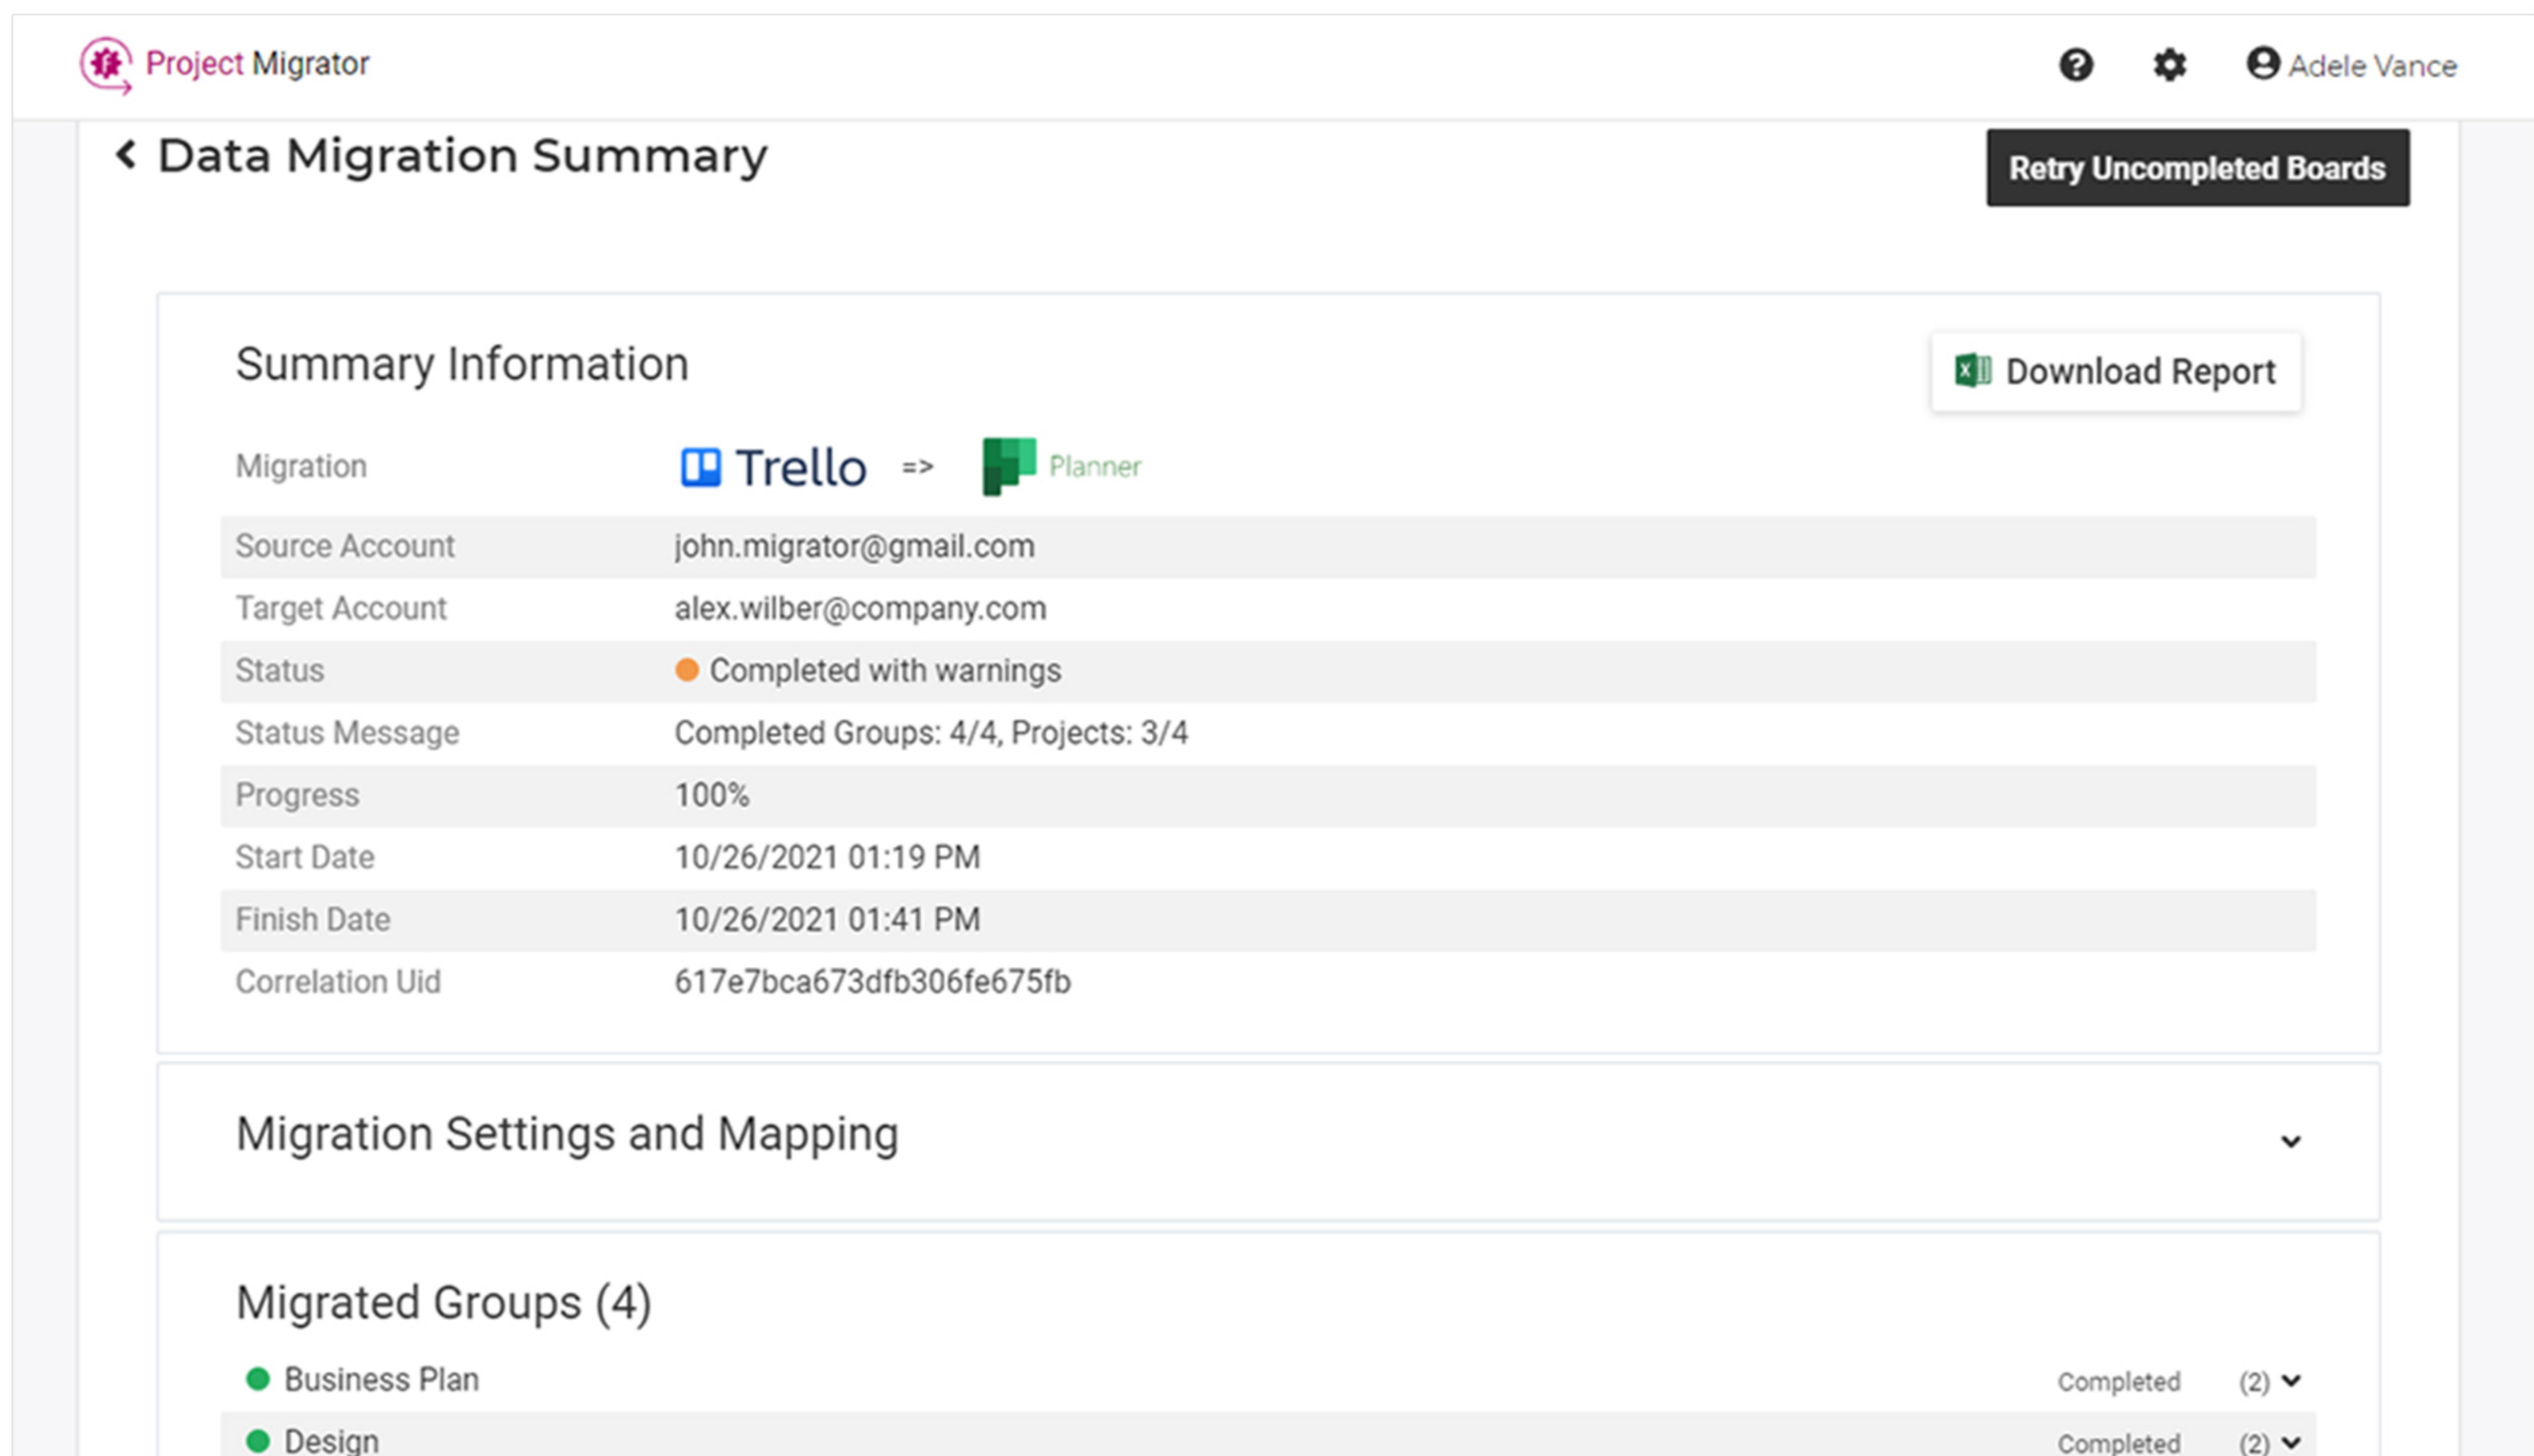

Before you migrate Trello to Microsoft Planner, you can decide which field from the source system goes to which field in the target system using the data mapping feature. Once you're confident that you're on the right path, you can start the migration.

Another great feature of this technology is migrating custom fields of your choice between your target and source environments. For example, user, card, and board field mapping features mean you have a wide-ranging configuration capability.

Lastly, you can tell whether your Trello to Planner migration attempts was successful or not. Thanks to the data migration summary feature showing the results.
