

Microsoft Planner Migration to New Planner

Microsoft Planner has become essential for collaboration and task management. However, with the release of New Planner, Microsoft has introduced a next-generation solution designed to elevate team productivity and streamline project workflows. Transitioning from Microsoft Planner to New Planner represents a strategic opportunity for organizations to embrace innovation and unlock new capabilities.

This whitepaper serves as a comprehensive guide to facilitate this migration process, offering insights, best practices, and practical tips to ensure a seamless transition.

Manual migration challenges

- ✓ Data duplicates
- ✓ Misnaming of files
- ✓ Loss of crucial data
- ✓ Takes much time
- ✓ Risks of human errors
- ✓ Additional operational costs

They affect the quality and completeness of the migration process, which, in turn, affects project timeliness and quality.

You are not alone

If your organization is currently struggling with moving data between systems such as Microsoft Planner and New Planner, you're not alone. Many companies that have experienced similar problems have overcome their challenges by choosing a unique lifeline—an automated tool called FluentPro Project Migrator.

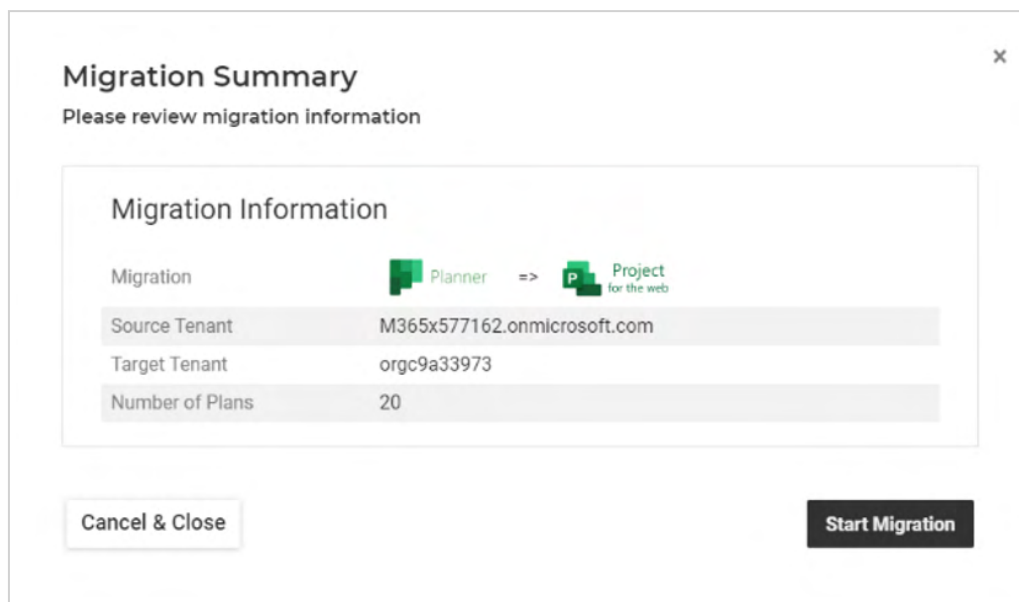

How Project Migrator solves data migration challenges

[Project Migrator](#) offers seamless data migration between different project management systems. Using a robust wizard, Project Migrator tackles many of the problems related to data migration between multiple systems. As a result, project managers and IT specialists may easily move from Planner to New Planner Premium.

In addition, Project Migrator offers a risk-free method with a built-in data mapping interface that helps mitigate uncertainties about how to assign tasks, execute updates, and provide feedback on progress between teams.

To perform the migration:

- You need to add Project Migrator to your personal apps in Microsoft Teams.
- After signing in, you can easily connect to the source and target systems.
- Choose all data or just specific items for migration.
- Additionally, Project Migrator allows you perform user mapping before you launch the migration.

Temporarily migration can be completed in the Planner to Project for the Web migration scenario

What are the advantages of having the best data migration tool?

- ✓ **Quicker migration process.** With Project Migrator, you save more than 90% of the time compared to manual migration method.
- ✓ **Reduced cost.** An automated, cloud-based solution eliminates the need to hire additional individual hands for data migration, reducing overhead costs and boosting ROI.
- ✓ **Minimized risk.** The automated cloud storage system reduces the risk of losing crucial data that arises from human errors and document corruption.
- ✓ **Secured data migration.** Running on the MS Azure cloud platform, Project Migrator guarantees the security of your project data throughout the entire migration process.
- ✓ **Satisfactory service.** Project Migrator reduces the disruption to everyday business operations, ensuring timely project completion and satisfied stakeholders.
