

# Migrating from Microsoft Project Online to New Planner

With its extensive features tailored for complex project management, Project Online has been a stalwart choice for many enterprises. However, as the digital landscape evolves towards more agile and collaborative approaches, New Planner emerges as a refreshing alternative, offering simplicity, flexibility, and enhanced collaboration features.

The decision to migrate from Project Online to New Planner is not merely a technical shift but a strategic endeavor to unlock new potential, enhance productivity, and foster a culture of collaboration within the organization. However, such a transition requires careful planning, thorough understanding, and strategic execution to ensure a smooth and successful migration process.

## Manual migration challenges

- ✓ Data duplicates
- ✓ Misnaming of files
- ✓ Loss of crucial data
- ✓ Takes much time
- ✓ Risks of human errors
- ✓ Additional operational costs

They affect the quality and completeness of the migration process, which, in turn, affects project timeliness and quality.

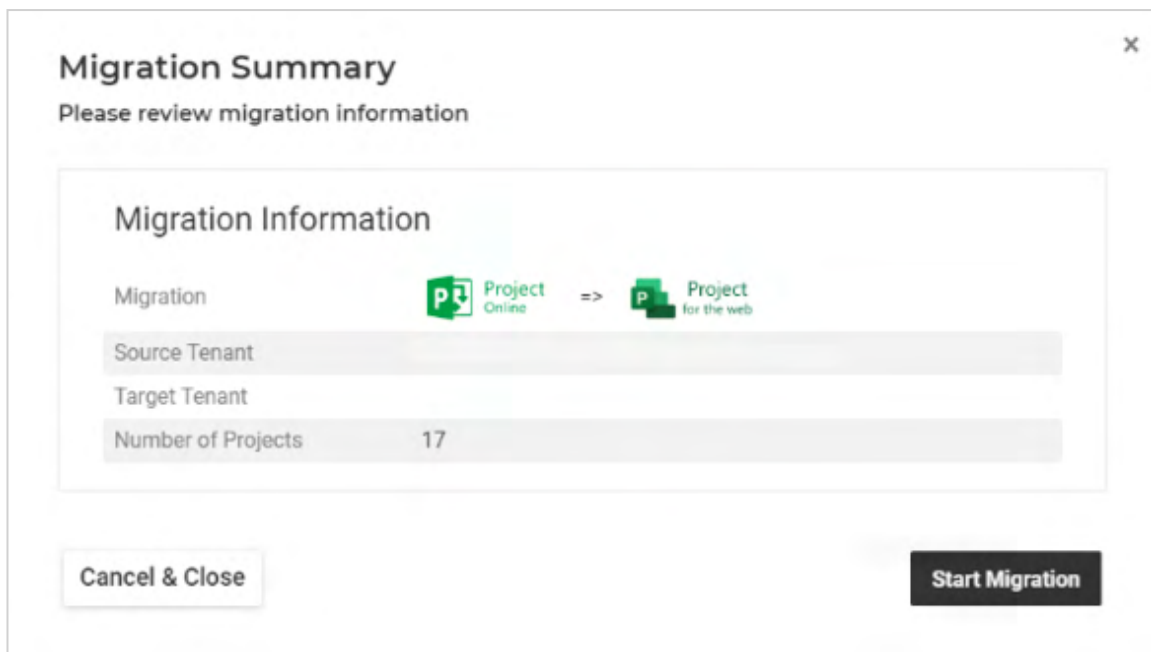

## Project Migrator solves data migration challenges

Project Migrator offers seamless data migration between different project management systems. Using a robust wizard, Project Migrator tackles many of the problems related to data migration between multiple systems. As a result, project managers and IT specialists may easily move from Project Online to New Planner.

In addition, Project Migrator offers a risk-free method with a built-in data mapping interface that helps mitigate uncertainties about how to assign tasks, execute updates, and provide feedback on progress between teams.

To perform the migration:

- You need to add Project Migrator to your personal apps in Microsoft Teams.
- After signing in, you can easily connect to the source and target systems.
- Choose all data or just specific items for migration.
- Project Migrator allows you perform user mapping before you launch the migration.

*Temporarily migration can be completed in the Project Online to Project for the Web migration scenario*

## What are the advantages of having the best data migration tool?

- ✓ **Quicker migration process.** With Project Migrator, you save more than 90% of the time compared to manual migration method.
- ✓ **Reduced cost.** An automated, cloud-based solution eliminates the need to hire additional individual hands for data migration, reducing overhead costs and boosting ROI.
- ✓ **Minimized risk.** The automated cloud storage system reduces the risk of losing crucial data that arises from human errors and document corruption.
- ✓ **Secured data migration.** Running on the MS Azure cloud platform, Project Migrator guarantees the security of your project data throughout the entire migration process.
- ✓ **Satisfactory service.** Project Migrator reduces the disruption to everyday business operations, ensuring timely project completion and satisfied stakeholders.
